

Micro Motion® Model HPC010P Ultra High Pressure Flowmeter

Global industry standard for ultra high pressure environments

- A Coriolis mass flow meter designed for high pressure environments up to 15,000 psi (1034 bar), such as chemical injection for the oil and gas industry
- Micro Motion MVD™ Direct Connect™ technology for space and weight savings
- Variety of transmitter options provide multi-variable outputs to accommodate any design requirements
- Compact design with no moving parts, no special mounting, or flow conditioning required

Micro Motion® Model HPC010P Ultra High Pressure Flowmeter

Micro Motion® Model HPC010P meters are specifically designed to meet the challenges of ultra high pressure environments. The meter's increased rangeability allows customers the flexibility to use the sensor for liquid applications where pressure range measurements are critical.

Coriolis meters

Coriolis meters offer dramatic benefits over traditional volumetric measurement technologies. Coriolis meters:

- Deliver accurate and repeatable process data over a wide range of flow rates and process conditions.
- Provide direct inline measurement of mass flow and density, and also measure volume flow and temperature—all from a single device.
- Have no moving parts, so maintenance costs are minimal.
- Have no requirements for flow conditioning or straight pipe runs, so installation is simplified and less expensive.
- Provide advanced diagnostic tools for both the meter and the process

Model HPC010P meters

Micro Motion HPC010P meters feature integral transmitters, making them easy to install. Offered with Model 1700, Model 2200, Model 2400, Model 2700, and Model 5700 transmitters with MVD technology, you can choose single or multivariable output configurations with milliamp, pulse, dual pulse, digital outputs, and an integral display.

Micro Motion MVD™ Direct Connect™ technology makes Coriolis flowmeters from Micro Motion the best choice for high pressure applications that can benefit from MVD Direct Connect technology, which allows sensors to communicate directly with Modbus. This technology makes transmitters unnecessary in applications that have weight and space limitations.

Measurement principles

As a practical application of the Coriolis effect, the Coriolis mass flow meter operating principle involves inducing a vibration of the flow tube through which the fluid passes. The vibration, though it is not completely circular, provides the rotating reference frame which gives rise to the Coriolis effect. While specific methods vary according to the design of the flow meter, sensors monitor and analyze changes in frequency, phase shift, and amplitude of the vibrating flow tubes. The changes observed represent the mass flow rate and density of the fluid.

Mass flow measurement

The measuring tubes are forced to oscillate producing a sine wave. At zero flow, the two tubes vibrate in phase with each other. When flow is introduced, the Coriolis forces cause the tubes to twist resulting in a phase shift. The time difference between the waves is measured and is directly proportional to the mass flow rate.

Performance specifications

Standard reference conditions are water at 68 °F (20 °C) to 77 °F (25 °C) and 14.5 to 29 psig (1 to 2 barg). Accuracy is based on industry leading accredited calibration stands according to ISO 17025.

Accuracy and repeatability on liquids and slurries

Stated performance is at standard reference conditions.

| Performance | Specification |
|---------------------------|--|
| Mass flow accuracy | ±0.20% of rate |
| Mass flow repeatability | ±0.10% of rate |
| Volume flow accuracy | ±0.20% of rate |
| Volume flow repeatability | ±0.10% of rate |
| Density accuracy | ±0.005 g/cc (±5 kg/m ³) |
| Density repeatability | ±0.0025 g/cc (±2.5 kg/m ³) |
| Temperature accuracy | ±1 °C ±0.5% of reading |
| Temperature repeatability | ±0.2 °C |

Liquid flow rates

Nominal flow rate

Micro Motion has adopted the term nominal flow rate, which is the flow rate at which water at reference conditions causes approximately 14.5 psig (1 bar) of pressure drop across the meter.

Mass flow rates

| Model | Nominal flow rate | | Maximum flow rate | |
|---------|-------------------|------|-------------------|------|
| | lbm/min | kg/h | lbm/min | kg/h |
| HPC010P | 1.8 | 50 | 8.8 | 240 |

Volume flow rates

| Model | Nominal flow rate | | Maximum flow rate | |
|---------|-------------------|------|-------------------|-----|
| | gal/min | l/h | gal/min | l/h |
| HPC010P | 0.22 | 49.0 | 1.05 | 240 |

Zero stability

Zero stability is used when the flow rate approaches the low end of the flow range where the meter accuracy begins to deviate from the stated accuracy rating, as depicted in the table below. When operating at flow rates where meter accuracy begins to deviate from the stated accuracy rating, accuracy is governed by the formula: accuracy = (zero stability/flow rate) x 100%. Repeatability is similarly affected by low flow conditions.

| Model | lbm/min | kg/h |
|---------|---------|------|
| HPC010P | .002 | 0.05 |

Operating conditions: Environmental

Vibration limits

Vibration Broadband Random

- 5 to 1,000 Hz; 1.25E-4 g²/Hz per IEC 60068-2-64
- Total: 0.35g RMS

Vibration isolation should be used in installations above 0.35 g RMS or for applications requiring Lloyd's approval.

Vibration isolation clamps are available as a spare part. For more information about mounting a sensor in high vibration environments, contact Micro Motion.

Temperature limits

| Component | Limit |
|---------------------------|---------------------------------|
| Process fluid temperature | -58 to +257 °F (-50 to +125 °C) |
| Ambient temperature | -40 to +140 °F (-40 to +60 °C) |

Notes

- The electronics cannot be operated where the ambient temperature is below -40 °F (-40 °C) or above +140 °F (+60 °C). If a sensor is to be used where the ambient temperature is outside of the range permissible for the electronics, the electronics must be remotely located where the ambient temperature is within the permissible range.
- Temperature limits may be further restricted by hazardous area approvals. Refer to the hazardous area approvals documentation shipped with the sensor or available from the Micro Motion web site (www.micromotion.com).

Operating conditions: Process

Process temperature effect

- For mass flow measurement, process temperature effect is defined as the change in sensor flow accuracy due to process temperature change away from the calibration temperature. Temperature effect can be minimized by zeroing at the process conditions.
- For density measurement, process temperature effect is defined as the change in sensor density accuracy due to process temperature change away from the calibration temperature.

| Component | Rating |
|--------------------|---------------------------------------|
| Mass flow accuracy | ±0.00175% of maximum flow rate per °C |
| Density accuracy | ±0.001 g/cm³ per °C |

Process pressure effect

Process pressure effect is defined as the change in sensor flow and density accuracy due to process pressure change away from the calibration pressure.

| Component | Specification |
|--------------------|---|
| Mass flow accuracy | No effect up to maximum pressure rating |
| Density accuracy | No effect up to maximum pressure rating |

Sensor maximum working pressure

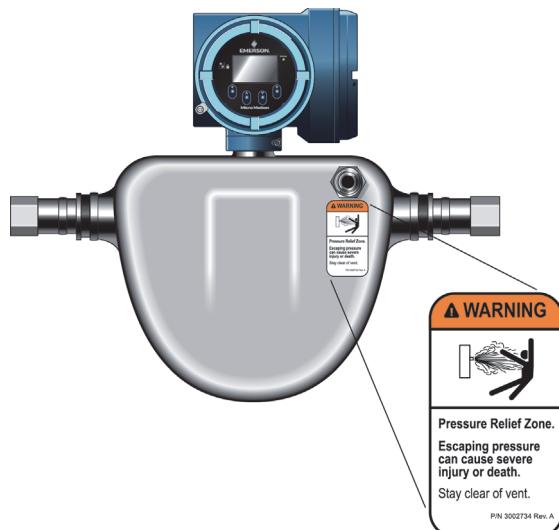

| Component | Rating |
|-----------------------|--|
| All wetted components | 15,000 psi (1034 bar) at operating temperature |
| Case | 115 psig (8 bar) with rupture disk |

HPC010P sensors comply with the high pressure piping requirements of ASME B31.3 Process Piping Code and the European Pressure Equipment Directive 2014/68/14 EU (PED).

Pressure relief

The HPC010P has a rupture disk installed on the case as a standard option. Rupture disks are meant to vent process fluid from the sensor case in the unlikely event of a flow tube breach. Some users connect a pipeline to the rupture disk to help contain escaping process fluid. If the rupture disk is activated by a tube breach, the seal in the rupture disk will be broken, and the Coriolis meter should be removed from service.

The rupture disk is located as follows on the HPC010P, and the warning tag shown is placed next to it.

Personnel must stay clear of the rupture disk pressure relief area. High-pressure fluid escaping from the sensor can cause severe injury or death.

The HPC010P is available without a rupture disk if required. For details, contact Micro Motion.

Meter approvals and certifications

Approvals and certifications

| Type | Approval or certification | |
|-----------------------------|---|---|
| CSA and CSA C-US | Class I, Div. 1, Groups A, B, C, and D Class I, Div. 2, Groups A, B, C, and D Class II, Div. 1, Groups E, F, and G Dual Seal | |

(1) Dust approval available only upon request

Notes

- Approvals shown are for model HPC 010 meter configured with Models 2200, 2400 and 5700 transmitters. Meters with integral electronics may have more restrictive approvals. Refer to the Product Data Sheet for each transmitter for details.
- When a meter is ordered with hazardous area approvals, detailed information is shipped along with the product.
- More information about hazardous approvals, including detailed specifications and temperature graphs for all meter configurations is available on the HPC010P product page at the Micro Motion web site (www.micromotion.com).

Industry standards

| Type | Standard |
|---------------------------|---|
| Pressure vessel standards | <ul style="list-style-type: none"> ■ Pressure Equipment Directive (PED) 2014/68/EU ■ Product complies with the high-pressure piping requirements of ASME B31.3, Chapter IX. |

Transmitter interface

A Micro Motion flowmeter system is highly customizable to provide a configuration that is tailor-fit to specific applications.

Robust transmitter offerings allow a multitude of mounting options:

- Compact mounting integral to the sensor for weight and space considerations
- Field mount variants for harsh conditions
- Compact control room DIN rail packages for optimal locating in a control cabinet
- Two-wire transmitter to save on wiring installation cost
- Stainless steel transmitter options for off-shore applications

Model HPC010P meters are available with an expansive selection of input and output connectivity options including the following:

- 4-20 mA
- HART™
- WirelessHART™
- EtherNet/IP
- FOUNDATION™ fieldbus
- PROFIBUS
- Modbus®
- Other protocols may be available on request

Physical specifications

Materials of construction

General corrosion guidelines do not account for cyclical stress, and therefore should not be relied upon when choosing a wetted material for your Micro Motion meter. For material compatibility information, refer to the *Micro Motion Corrosion Guide* available at the Micro Motion web site (www.micromotion.com).

Wetted parts

| Model | Wetted parts |
|---------|---------------------|
| HPC010P | Nickel alloy N06022 |

Non-wetted part material options

| Component | Enclosure rating | 316L/CF-3M stainless steel | Polyurethane-painted aluminum |
|--------------------------------|-------------------|----------------------------|-------------------------------|
| Sensor housing | NEMA 4X (IP66/67) | • | |
| Core processor housing | NEMA 4X (IP66/67) | • | • |
| Junction box housing | IP66/67 | • | • |
| Model 2200 transmitter housing | NEMA 4X (IP66/67) | • | • |
| Model 2400 transmitter housing | NEMA 4X (IP66/67) | • | • |
| Model 5700 transmitter housing | NEMA 4X (IP66/67) | • | • |

Weight

| Model | Sensor weight | |
|--|---------------|-----|
| | lb | kg |
| HPC010P with 316L stainless steel case | 19 | 8.6 |

Notes

- Weight specifications are based upon 9/16-inch autoclave connections.
- Insulation jackets, steam kits, and paint options are also available.

Process connections

The process connections are 9/16-inch medium pressure autoclave compatible fittings, as well as other options available per request.

Dimensions

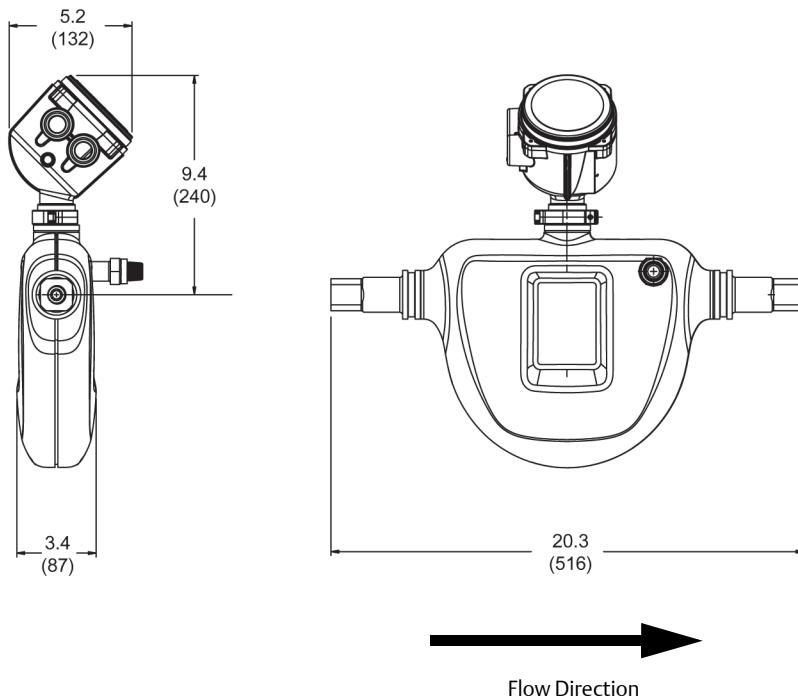

Complete and detailed dimensional drawings can be found through the product link in our online store at (www.micromotion.com/onlinestore).

Note:

- Dimensions $\pm 1/8$ inch (± 3 mm) apply only to face to face - other dimensions are nominal
 - Representative of a sensor fitted with 9/16-inch medium pressure autoclave compatible fittings
 - These dimensions apply to only one electronic interface option – others are available
-

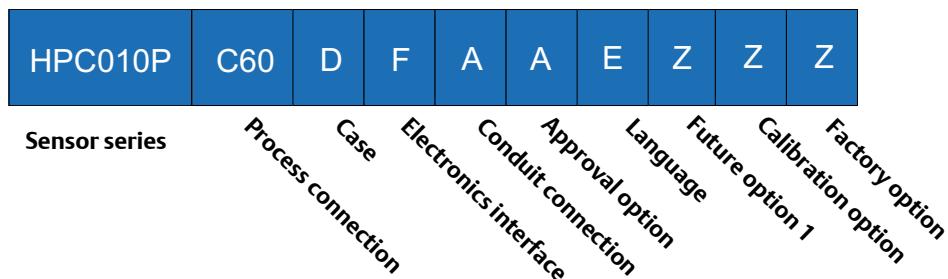

Dimensions for the HPC010P meter

See the transmitter PDS for the transmitter dimensions. All dimensions $\pm 1/8$ in. (3 mm).

Certificates, tests, calibrations, and services

These option codes can be added to the end of the model code if needed, but no code is required when none of these options is selected.

Note

There may be additional options or limitations depending on total meter configuration. Contact a sales representative before making your final selections.

Material quality examination tests and certificates

Select any from this group.

| Code | Factory option |
|------|--|
| MC | Material inspection certificate 3.1 (supplier lot traceability per EN 10204) |
| NC | NACE certificate 2.1 (MR0175 and MR0103) |
| NS | Certificate of Compliance Certificate 2.1 to NORSOK requirements for material, fabrication, examination, and testing |

Radiographic testing

Select only one from this group.

| Code | Factory option |
|------|--|
| RE | X-ray package 3.1 (radiographic examination certificate; weld map; radiographic inspection NDE qualification) |
| RT | X-ray package 3.1 (radiographic examination certificate with digital image; weld map; radiographic inspection NDE qualification) |

Pressure testing

| Code | Factory option |
|------|----------------------------------|
| HT | Hydrostatic test certificate 3.1 |

Dye penetrant examination

| Code | Factory option |
|------|--|
| D1 | Dye Penetrant Test Package 3.1 (Sensor only; liquid dye penetration NDE qualification) |

Weld examination

| Code | Factory option |
|-------------|--|
| WP | Weld procedure package (weld map, weld procedure specification, weld procedure qualification record, welder performance qualification) |

Positive material testing

| Code | Factory option |
|-------------|---|
| PM | Positive Material Test Certificate 3.1 (without carbon content) |

Special cleaning

| Code | Factory option |
|-------------|--|
| O2 | Declaration of compliance oxygen service 2.1 |

Metrology compliance

| Code | Factory option |
|-------------|--|
| GR | Russian metrology calibration verification certificate |

Accredited calibration

| Code | Factory option |
|-------------|---|
| IC | ISO17025 accredited calibration and certificates (9 points total) |

Special calibration options

Select either none, CV, or CV with one of the additional verification point options.

Note:

For all special calibration options, the minimum flow rate for any verification point is 5% of sensor nominal flow rate.

| Code | Factory option |
|-------------|--|
| CV | Custom verification (alter original verification points) |
| 01 | Add 1 additional verification point |
| 02 | Add 2 additional verification point |
| 03 | Add 3 additional verification point |
| 06 | Add up to 6 additional verification points |
| 08 | Add up to 8 additional verification points |
| 16 | Add up to 16 additional verification points |

Sensor completion options

Select any from this group.

| Code | Factory option |
|-------------|-----------------------|
| WG | Witness general |
| SP | Special packaging |

Instrument tagging

| Code | Factory option |
|-------------|---|
| TG | Instrument tagging - customer information required (max. 24 characters) |
